

# VETTA

The public record of who Parliament lets into power, and on what evidence.

VETTING RECORD · CIVIC TECH TOOLS · BUILT BY AGENT9

THE PROBLEM

# 93 nominations. One rejection.

Kenya's Parliament vets every Cabinet Secretary and Principal Secretary before they take office. Across the 2022 Cabinet, the 2022 PS slate and the 2024 reconstitution, the gate said yes 92 times.

WHAT THE RECORD SHOWS

# A mass dismissal that returned half the cabinet.

On 11 July 2024, during the Finance Bill protests, the President dismissed the cabinet. Four weeks later, Parliament approved its replacement. The pattern only appears when appointment histories are linked per person.

98.9%

Approval rate across three vetting cycles (92 of 93)

10 of 19

2024 appointees who sat in the cabinet dissolved four weeks earlier

9 of 10

Returnees who simply changed docket

231 days

Gender docket vacant after the only House rejection

## WHAT VETTA DOES

# One durable, citable record for every public appointment.

### BEFORE · T-30 TO HEARING

## Dossier

Source-linked appointment history for every nominee. A public question queue, ranked by citizens.

### DURING · 28-DAY WINDOW

## Hearing record

Which questions MPs asked, which they ignored, per topic. Silence becomes visible.

### AFTER · POST-VOTE

## Vote trail

Committee report against citizen submissions. A per-MP record, shareable at the next election.

# Every appointment linked to the person.

- 93 people, 111 appointments, each with its nomination, decision and exit dates.
- Every fact cited to dated reporting or the official record.
- Cross-checked across independent sources before it ships.

# Computed, not asserted.

- **8 deterministic rules** run over the ledger at build time.
- Each rule is stated in plain language, so **anyone can re-derive a match by hand**.
- A signal marks **a pattern in the process**. It is never a finding about a person.
- The ledger has already **caught two errors** in the project's own working notes.

BUILT TO STAY UP

# A public record is only useful if it survives pressure.

| LAYER               | STATUS  | WHAT IT GUARANTEES                                                                  |
|---------------------|---------|-------------------------------------------------------------------------------------|
| Static site         | LIVE    | No database to take down. Any host, mirror or USB stick can serve it.               |
| Content hashes      | LIVE    | sha256 per record plus a ledger root. Tampering on any mirror is detectable.        |
| Open data export    | LIVE    | Ledger, manifest and events published for independent archiving.                    |
| Signed Nostr events | READY   | Each record is a replaceable, signed event. Blocking one domain does not remove it. |
| Secure tip line     | PLANNED | Sealed messages to reviewers, reachable even if the domain is blocked.              |

**"A record with no signals is not an endorsement.  
A record with signals is not an accusation."**

- **No bare allegations.** Every flag cites a source document, and rejection grounds are recorded verbatim.
- **Process, not persons.** Signals describe how an appointment moved through the gate.
- **Corrections are first-class.** A secure reporting channel, and corrections replace the old record everywhere it is mirrored.
- **Experimental scoring stays gated.** The Integrity Index runs on synthetic data, stamped MOCK and pseudonymised for any public deployment.

WHERE IT STANDS

# Working prototype today. Election-ready by 2027.

| PHASE                    | STATUS | SCOPE                                                                         |
|--------------------------|--------|-------------------------------------------------------------------------------|
| Ledger and signals       | BUILT  | 93 records sealed, 8 signal rules, overview, vetting gate, scoring sandbox    |
| Resilience layer         | BUILT  | Static build, content hashes, open data, Nostr export                         |
| Hardening · Oct–Nov 2026 | NEXT   | Gazette watcher, Hansard parser, citizen questions, CSO submission portal     |
| Scale · 2027             | NEXT   | Kiswahili UI, SMS alerts, per-MP scorecards ahead of the August 2027 election |
| Partnership              | OPEN   | Hosting and editorial ownership with Mzalendo, not yet agreed                 |

THE ASK

# Put the vetting gate on the record before the 2027 election.

Partner with us to host VETTA under Civic Tech Tools, own the editorial review, and put every appointment in the next Parliament on a public, verifiable record.
